

Cisco's Fourth Generation of Big Data Solutions

Highlights

Optimized for Enterprise Big Data and Analytics Deployments

- Cisco UCS® Integrated Infrastructure for Big Data and Analytics is a platform for emerging solutions, including the edge, streaming, and data center core analytics applications.
- It is based on a fully redundant, high-performance fabric-based architecture with high computing power, I/O bandwidth, and storage capacity. Use the solution as is, or customize or scale it to meet your specific needs.
- Cisco UCS Director Express for Big Data offers end-to-end provisioning and deployment of Hadoop clusters

Built on Cisco UCS Advantages

- The solution includes Cisco® unified fabric, unified management, and advanced monitoring capabilities.
- Consistent and rapid deployment using Cisco UCS service profiles delivers consistency and out-of-the-box performance.
- The solution offers a global inventory view, one-click system software management, and one-click configuration changes.

A Solution with Less Risk

- Engineering innovations, prevalidation, and tighter integration of software stacks reduce integration and deployment risk.
- Extensive testing and validation of software distributions allow you to deploy the solution with confidence.

Our industry-leading solutions are designed to deliver out-of-the-box performance while scaling from small to very large as your business needs grow.

Cisco UCS® Integrated Infrastructure for Big Data and Analytics offers a comprehensive solution for enterprise-class deployments. This fourth-generation solution builds upon the previous generation and has been widely adopted for agriculture, education, entertainment, finance, healthcare, industrial, insurance, public-sector, and service provider environments. The Cisco UCS Integrated Infrastructure solution offers complete solutions with industry-leading partnerships.

With complete, easy-to-order packages that include computing, storage, connectivity, and unified management features, Cisco UCS Integrated Infrastructure for Big Data and Analytics accelerates deployment, delivers predictable performance, and reduces total cost of ownership (TCO). Our newest offering is powered by the Intel® Xeon® processor E5-2600 v4 product family.

Eight Reference Architectures

Our reference architectures are carefully designed, optimized, and tested with the leading big data software distributions to achieve a balance of performance and capacity to address specific application requirements. You can deploy these configurations as is or use them as templates for building custom configurations. You can scale your solution as your workloads demand, including expansion to thousands of servers through the use of Cisco Nexus® 7000 and 9000 Series Switches. The configurations vary in disk capacity, bandwidth, and price and performance characteristics. Base configurations for each solution are listed in Table 1.
