InfoVista Teams with Huawei to Bolster Network Performance for Global Service Providers

InfoVista (Euronext IFV - FR0004031649), the leading service-centric performance management software vendor, announced today a partnership with Huawei, a leader in providing next-generation telecommunications network solutions for operators around the world. A central component of the partnership is InfoVista's support for Huawei's IP core routers and edge switching solutions.

By incorporating key features of InfoVista's flagship performance management software, VistaInsight® for Networks, Huawei will significantly differentiate its product offerings and provide service providers unparalleled visibility into the performance of their networks and – by extension – assure the best possible quality of service for the end user.

VistaInsight for Networks has been verified to support **Huawei's Quidway AR Series Service Routers and the Quidway NE Series Core Switching Routers**. The verification includes automatic probe creation and discovery on the AR Series with a comparative support for NQA probes on the **NE40, 40E, 80, 80E and 5000E Routers**. This will enable the collection and analysis of packet delay, jitter and loss parameters essential in providing carrier class Service Level Agreements (SLA) to customers.

"Our deep market presence, coupled with field-proven solutions, makes InfoVista an ideal partner for Huawei as it looks to expand its customer roster," said Manuel Stopnicki, chief technology officer for InfoVista. "Today's partnership emphasizes our commitment to helping Huawei achieve the best possible Carrier Ethernet service for its customers."

VistaInsight for Networks is a next-generation performance management solution that enables service providers to adopt new OSS business models around the delivery of differentiated IP connectivity, between any kind of device, with managed services or triple play offerings. The solution is preemptive and proactive, going beyond real-time performance reporting to also provide capacity planning, guaranteeing the uptime of business services.

"InfoVista's market leading approach to addressing service provider and enterprise requirements for detailed performance reports makes them an important technology partner," said Gan Jianhua, vice president of sales, Datacom Product Line for Huawei. "By incorporating key features of VistaInsight into our renowned routing and switching solutions, we'll be able to provide service-centric reporting and address our customers' assurance needs."
