## Data Acquisition and Multimeter System Specifications

### SPECIFICATION CONDITIONS

This document contains specifications and supplemental information for the DAQ6510. Specifications are the standards against which the DAQ6510 is tested. Upon leaving the factory, the DAQ6510 meets these specifications. Supplemental and typical values are nonwarranted, apply at 23 °C, and are provided solely as useful information. Measurement accuracies are specified for plug-in module user input terminals and DAQ6510 front input terminals and include conversion error for thermocouple, thermistor, and RTD measurements. Additional switching module errors are included in the Characteristics section under each function.

Measurement conditions include:

- After a 30-minute warmup period
- 1 PLC or 5 PLC measurement rate; for NPLC settings less than 1 PLC, add appropriate noise error from Measurement Noise table under each function
- Autozero enabled
- Calibration period: one year (recommended) or two years. Calibration period may vary depending on customer requirements
- 24-hour accuracy specification is relative to calibrator accuracy
- The communication accessory slot cover or an optional KTTI interface card is properly installed on the rear of the unit

Definitions:

- **T<sub>CAL</sub>:** The temperature at which the instrument was calibrated (23 °C for factory calibration)
- **Temperature coefficient:** Additional uncertainty added for each °C outside T<sub>CAL</sub> ±5 °C
- **Power Line Cycle (PLC):** 16.67 ms at 60 Hz and 20 ms at 50 Hz or 400 Hz line frequency; frequency automatically sensed at power up

<sup>5</sup> Specifications are for 2- and 4-wire resistance. For 2-wire, use relative offset, and add 100 m $\Omega$  of additional uncertainty. For 4-wire, turn offset compensation on for  $\leq 10$  k $\Omega$  and off for  $> 10$  k $\Omega$ . The 1  $\Omega$  range is for 4-wire only.

<sup>6</sup> Requires a 10-reading digital filter at 1 PLC or 2-reading digital filter at 5 PLC.

<sup>7</sup> Specified for < 10% lead-resistance mismatch at HI and LO.

<sup>8</sup> Applies for 1  $\Omega$  through 1 M $\Omega$  ranges. For 100  $\Omega$  range, multiple the listed values by five. Noise values apply to terminals using a low-thermal short for 50 Hz and 60 Hz operation only. Measurements through a switching module may introduce additional noise.

External trigger in and trigger out	0 V to 5 V logic signal input and output, TTL-compatible, programmable edge pulse Minimum pulse width: 1 µs
External trigger out, maximum rate	Up to 90 kHz, measurement dependent
External trigger in, maximum rate	Up to 150 kHz, measurement dependent

**SCANNING**

Scan count	1 to continuous
Scan interval	0 s to 27.7 hours
Channel delay	0 s to 60 s
Measure interval	0 s to 27.7 hours

**INTERNAL MEMORY**

Maximum reading memory (volatile)	Up to 7 million readings with a standard buffer (includes channel and formatting information)
Internal (nonvolatile) memory for saved scripts and scan configurations	6 MB, enables hundreds of scan configurations or TSP scripts to be saved in nonvolatile memory

<sup>53</sup> SCPI programmed using 4-byte binary format.

## GENERAL SPECIFICATIONS

<b>LINE POWER</b>	
<b>Power supply</b>	100 V, 120 V, 220 V, and 240 V ( $\pm 10\%$ )
<b>Power line frequency</b>	50 Hz to 60 Hz and 400 Hz, automatically sensed at power-up
<b>Maximum power consumption</b>	65 VA
<b>Typical power consumption</b>	30 VA
<b>Mains input fuse</b>	250 V, 1.25 A slow-blow fuse: Keithley replacement part number FU-106-1.25
<b>ENVIRONMENT AND REGULATORY</b>	
<b>Operating environment</b>	Specified for 0 °C to 50 °C, $\leq 80\%$ relative humidity at 35 °C, altitude up to 2000 meters
<b>Storage environment</b>	-40 °C to 70 °C
<b>Vibration</b>	MIL-PRF-28800F Class 3, random
<b>Warm-up</b>	30 minutes to rated accuracy
<b>Safety</b>	NRTL listed to UL61010-1 and CSA C22.2 No 61010-1; conforms to European Union Low Voltage Directive
<b>EMC</b>	Conforms to European Union EMC Directive
<b>MECHANICAL</b>	
<b>Display</b>	12.7 cm (5 in.) capacitive touch, color TFT WVGA (800 × 480) with LED backlight
<b>Rack dimensions (W × H × D)</b>	213.8 mm (8.42 in.) × 88.4 mm (3.48 in.) × 356.6 mm (14.04 in.)
<b>Bench dimensions (W × H × D)</b>	224.0 mm (8.82 in.) × 107.2 mm (4.22 in.) × 387.4 mm (15.25 in.)
<b>Shipping weight</b>	4.54 kg (10.0 lb) instrument only
<b>Input signal connections</b>	Front plug-in modules
<b>Plug-in module slot</b>	Two slots on the rear panel; see <a href="#">PLUG-IN MODULE ACCESSORIES</a>
<b>Communication slot</b>	One slot on the rear panel; see <a href="#">OPTIONAL INTERFACES AND PROGRAMMABLE DIGITAL I/O</a>
<b>Cooling</b>	Forced air, fixed speed
<b>REMOTE INTERFACE: STANDARD</b>	
<b>LAN/LXI compliance</b>	RJ-45 connector, 10/100BT; IP configuration; static or DHCP (manual or automatic) Web interface; virtual front panel; LXI compliance: LXI version 1.5 core 2016
<b>USB device (rear panel, type B)</b>	2.0 full speed, USBTMC compliant
<b>USB host (front panel, type A)</b>	USB 2.0, support for flash drives, FAT32; Capability: Import and export instrument configuration files, reading buffers, screen captures, and scripts
<b>LANGUAGE</b>	
<b>SCPI (default)</b>	Default command set: Standard Commands for Programmable Instruments, SCPI-1999
<b>TSP</b>	Embedded Test Script Processor (TSP) accessible from any host interface; responds to high-speed test scripts comprised of remote commands and statements (for example, branching, looping, and math); able to execute test scripts stored in memory without host intervention
<b>Emulation modes</b>	Keithley Model 2700 and Model 2701
<b>MATH FUNCTIONS</b>	
REL, minimum, maximum, average, standard deviation, peak-peak, dB, limit test, percent, 1/x, and mX+b with user-defined units displayed	
<b>MISCELLANEOUS</b>	
<b>Real-time clock</b>	Lithium battery backup, CR2032 coin-type, factory replaceable (3+ years of battery life); set and read year, month, day, hour, minute, and seconds (note that seconds are not adjustable)
<b>Timestamp resolution</b>	15 ns with standard or full buffer style
<b>Password protection</b>	30 characters
<b>Alarms</b>	Up to six: see <a href="#">OPTIONAL INTERFACES AND PROGRAMMABLE DIGITAL I/O</a>
<b>Power failure recovery mode</b>	User selectable, resumes scanning once power is restored

<b>PLUG-IN MODULE ACCESSORIES</b>	
<b>Module model</b>	<b>Description</b>
7700	20-channel differential multiplexer module
7701	32-channel differential multiplexer module
7702	40-channel differential multiplexer module
7703	32-channel, high-speed, differential multiplexer module
7705	40-channel single-pole control module
7706	All-in-one I/O module
7707	32-channel digital I/O module
7708	40-channel differential multiplexer module
7709	2-pole, 6 × 8 matrix module
7710	20-channel solid-state differential multiplexer with automatic CJC
7711	2 GHz, 50 Ω RF module
7712	3.5 GHz, 50 Ω RF module
<b>OPTIONAL INTERFACES AND PROGRAMMABLE DIGITAL I/O</b>	
<b>KTTI-RS232</b>	RS232, 9-pin d-sub female connector; standard baud rates from 300 bps to 115,200 bps are supported
<b>KTTI-GPIB</b>	GPIB IEEE-488.1 compliant; supports IEEE-488.2 common commands and status model topology
<b>KTTI-TSP</b>	RJ-45 (quantity 2); TSP-Link® expansion interface allows TSP-enabled instruments to trigger and communicate with each other
<b>Digital I/O</b>	For KTTI-RS232, KTTI-GPIB, and KTTI-TSP Connector: 9 pin d-sub female 5 V power supply pin: Limited to 500 mA > 4 V (solid-state fuse protected) Lines: Six input / output, user-defined for control, alarms (limits), or triggering Input signal levels: 0.7 V (maximum logic low), 3.7 V (minimum logic high) Input voltage limits: -0.25 V (absolute minimum), 5.25 V (absolute maximum) Maximum source current: 2.0 mA at > 2.7 V (per pin) Maximum sink current: -50 mA at 0.7 V (per pin, solid state fused)
