# 1 Introduction

This Readme file contains the changes and extensions for interNet Services V3.4B, which were implemented after the guides had been published.

## 1.1 Affected guides

The changes described here concern the following guides:

- [1] interNet Services V3.4B  
Administrator Guide  
Order number U41095-J-Z125-6-76  
Issued: June 2017
  
- [2] interNet Services V3.4B  
User Guide  
Order number U41096-J-Z125-6-76  
Issued: June 2017

## 2 Software extensions

### 2.1 New functionality with interNet Services V3.4B01

#### Additional options LOCK-FILE and DELETE-FILE with mail sending

With the mail sender there is now the possibility to lock a mail or attachment file during the time from issuing the SEND-MAIL command until the handover of the mail to a mail server. Furthermore there is the possibility to let the respective file be deleted automatically after the successful mail sending.

### 2.2 Changes to the Administration Guide [1]

#### 2.2.1 New functionality with MAIL V3.4B01

##### Section 11.2.1 SYSSSI

Additional option lockFileDefault:

The new operand LOCK-FILE of the SEND-MAIL command has besides \*NO and \*YES the default operand value \*STD. The option lockFileDefault determines whether \*STD is interpreted as \*NO or \*YES.

<b>lockFileDefault</b>
<b>{NO   YES} ...</b>

...

##### **NO**

The LOCK-FILE operand value \*STD of the SEND-MAIL command is interpreted as \*NO, i.e. by default there is no locking of the file. This is the default value.

##### **YES**

The LOCK-FILE operand value \*STD of the SEND-MAIL command is interpreted as \*YES, i.e. by default the file will be locked.

## 2.3 Changes to the User Guide [2]

### 2.3.1 New functionality with MAIL V3.4B01

#### Section 9.2 SDF command interface of the mail sender frontend

SEND-MAIL command:

The operands MAIL and ATTACHMENT have a sub operand structure \*FILE, with which one can specify a file containing the mail or attachment text respectively. To this structure two further operands are added, LOCK-FILE and DELETE-FILE, with which one can lock a file or initiate the deletion of the file after successful mail sending.

**LOCK-FILE = \*STD | \*NO | \*YES**

When LOCK-FILE=\*YES is specified, then the respective file will be locked at the receiving of the mail send order until the order is (successfully or not) finished by the service task. While the file is locked the file can't be deleted or modified. When one displays with the SHOW-FILE-LOCK command the locks set for a file, then the locks set by the mail sender can be identified by means of the TSN YML1 (this is the TSN assigned to the sub system MAILCLNT).

With LOCK-FILE=\*STD the value set with the SYSSSI option lockFileDefault applies.

**DELETE-FILE = \*NO | \*YES | \*DESTROY**

When DELETE-FILE=\*YES is specified, the file is deleted after a successful delivery of the mail to an SMTP server. When using \*DESTROY the file is overwritten with binary zeros before erasing it.

#### Section 9.3.1.4 Description of the macro calls

##### YMLSML – Send Mail

There is now also a version 3 of this macro. Beside an additional return code the data structure delivered by XPAND=DATA\_SPEC is modified for supporting the extensions described at the SEND-MAIL command. The up to now reserved byte YMLSDRS1 is renamed to YMLSDOPT and enables by setting the corresponding bits to request the deletion (optionally overwriting it beforehand with binary zeros) and locking of a file.

```

                                YMLSML MF=D,XPAND=DATA_SPEC,VERSION=3
                                MFTST MF=D,PREFIX=Y,MACID=MLS,ALIGN=F,
                                1          DMACID=MLS,SUPPORT=(E,D,C,M,L),DNAME=MLSDTSP
000000      2 YMLSDTSP DSECT ,
                                2          *,##### PREFIX=Y, MACID=MLS #####
                                1 * Data specification
000000      1 YMLSDTAG DS      H          tag of add. header
00000000F  1 YMLSDSPC EQU    15          dataspec
                                1 *
000002      1 YMLSDTYP DS      FL1       specification type
                                1 * Type of data specification
00000001  1 YMLSFILF EQU     1          file
00000002  1 YMLSDATA EQU     2          data
                                1 *
000003      1 YMLSDOPT DS      AL1       options
00000080  1 YMLSDDEL EQU     X'80'      delete file
00000040  1 YMLSDDES EQU     X'40'      destroy when deleting
00000020  1 YMLSDLCK EQU     X'20'      lock file
0000001F  1 YMLSDUNU EQU     X'1F'      unused
000004      1 YMLSDLEN DS      F          length of data. spec.
00000008  1 YMLSDTSP# EQU    *-YMLSDTAG
    
```

## **Chapter 10 Frequently asked questions (FAQ)**

### **Question:**

Mail sender: A file is locked despite the mail send order has been completed (successfully or not).

### **Answer:**

Talk to your system administrator, he can remove the file lock with the command REMOVE-FILE-ALLOCATION-LOCKS.
