

EXTENDED PACKING, SHIPPING, AND TRACKING FOR SAGE ERP

xCarrier for Sage ERP

xCarrier is a multi-carrier, multi-modal shipping system that operates as an extension of your Sage ERP. It is certified by Sage, as well as with your carriers. There is a reason that xCarrier is used by tens-of-thousands of shippers around the world.

Ease of Use

xCarrier is better than easy. It's brilliantly simple. Enter or scan a Sales Order or Delivery, and let xCarrier do the rest.

Shipping Execution

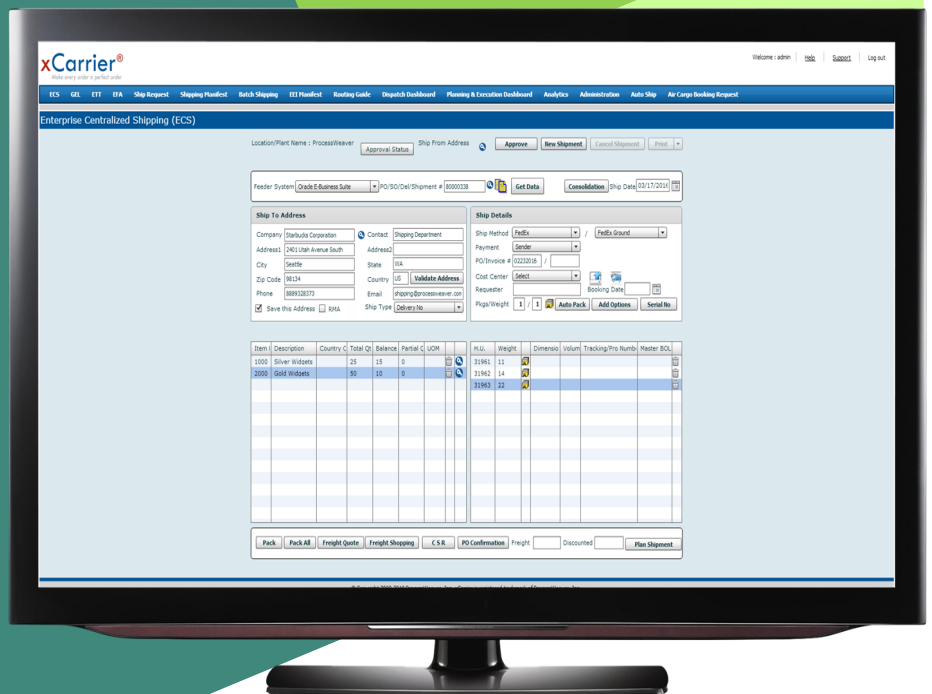

xCarrier automatically weighs, rates, validates the shipping address, prints all labels and documents, tenders shipments to your carriers, and automatically updates Sage ERP with transportation costs and tracking numbers.

Logistics Data Quality

xCarrier not only corrects and validates shipping addresses, it marks them as residential or commercial so that your rate correctly. If you ship international, xCarrier can perform denied parties screening before the shipment leaves your dock.

Shipment Track and Trace

Once your shipments are on carrier trucks, xCarrier doesn't stop there. By attaching a visibility tether to each and every package, xCarrier proactively tracks all shipments and returns important supply chain information such as Proof of Deliveries.

YOU DON'T HAVE TO SETTLE!

FOR MANUAL PROCESSES OR
OUTDATED TECHNOLOGY THAT
MAY BE COSTING YOU
BIG DOLLARS

LET XCARRIER TRANSFORM YOUR OUTBOUND SHIPPING OPERATION

You no longer have to settle for manual processes or outdated shipping technology that is difficult to use and maintain, fails to prevent shipping errors, and does not operate as an extension of your ERP system. Let ProcessWeaver help you better leverage your investment in Sage.

Specialized Capabilities

Freight Shopping

If you use multiple carriers to manage your outbound transportation, why not rate shop them to gain price and time-in-transit advantages. Improve customer service, while reducing your transportation costs. xCarrier allows you to rate shop at the time of sales order creation from with your Sage ERP system.

Routing Guide

If making the correct carrier selection involves more than price and times-in-transit, xCarrier includes a configurable routing guide that allows you to manage multiple business rules, such as minimum and maximum weight considerations, ship from locations, destinations, product types, day of the week, and much more. Whatever your routing rules or logic, xCarrier's Routing Guide can be configured to help you manage this critical transportation function.

Global Trade Export Filings

If your company ships internationally, and the goods value of a shipment exceed \$ 2,500, in most instances you're required to file your export information with U.S. Customs and Border Protection ACE system. ProcessWeaver allows you to eliminate filing this information via the ACE web site or through some costly third-party, by letting you manage all your filings directly from xCarrier.

Dangerous Goods Shipping

Shipping hazardous material is both time consuming and complicated. xCarrier HazMat component facilitates the production of all required hazardous material documents for transportation, domestically or internationally, by ground or air. In addition, it can perform all compliance checks necessary to ensure that shipments will not be returned by the carrier for inaccuracies, and helps reduce or virtually eliminate the risks of fines or carrier service suspensions.

Inbound Supplier/Vendor Portal

xCarrier not only allows shippers to manage their outbound shipping activities, but manage the inbound shipping from suppliers, distributors, and logistics services providers via a simple-to-use web portal that your trading partners can use to ship products to you. You no longer need to give away your account number. You no longer have to worry that suppliers are upgrading shipments to more costly expedited services. And with xCarrier's Supplier TMS Portal (STP) you always have visibility on goods coming into your facilities.

About ProcessWeaver

For the 10 + years ProcessWeaver has successfully worked with organizations running Sage ERP system to help them bring together technology and process improvement to empower better transportation execution. ProcessWeaver solutions are used by tens-of-thousands of shippers in more than 65 countries; with millions and millions of packages being shipped on them each year. With 150+ dedicated employees, your ProcessWeaver team is here to help you achieve shipping excellence wherever you ship from or ship to anywhere in the world.
